

CREATE IBM WATSON IoT PLATFORM AND DEVICE

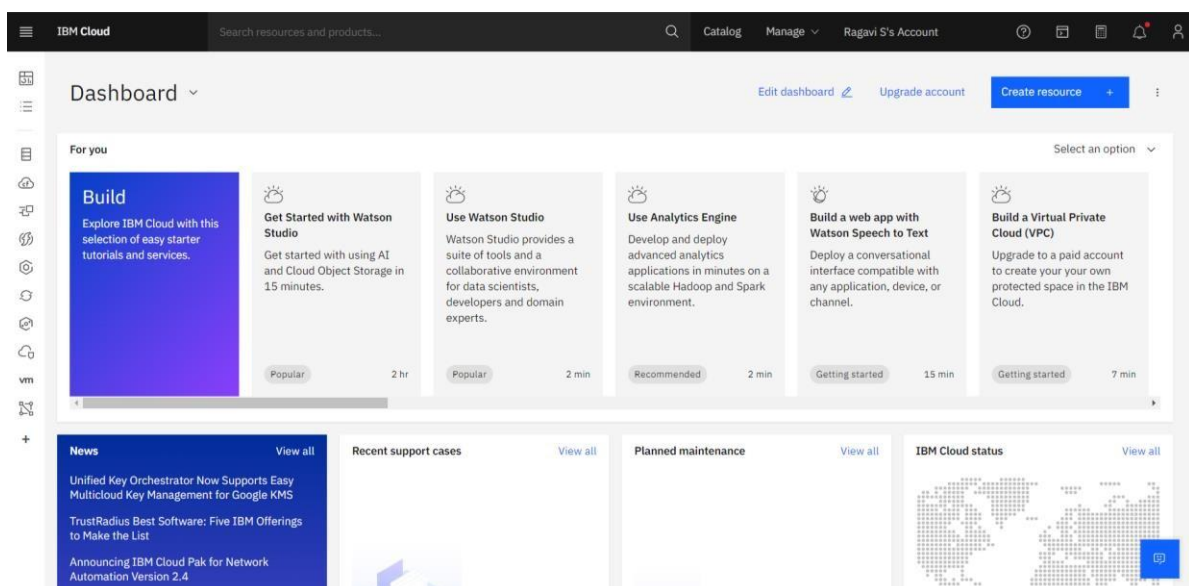

Team ID	PNT2022TMID28203
Project Name	IoT based safety gadget for child safety monitoring and notification

STEPS:

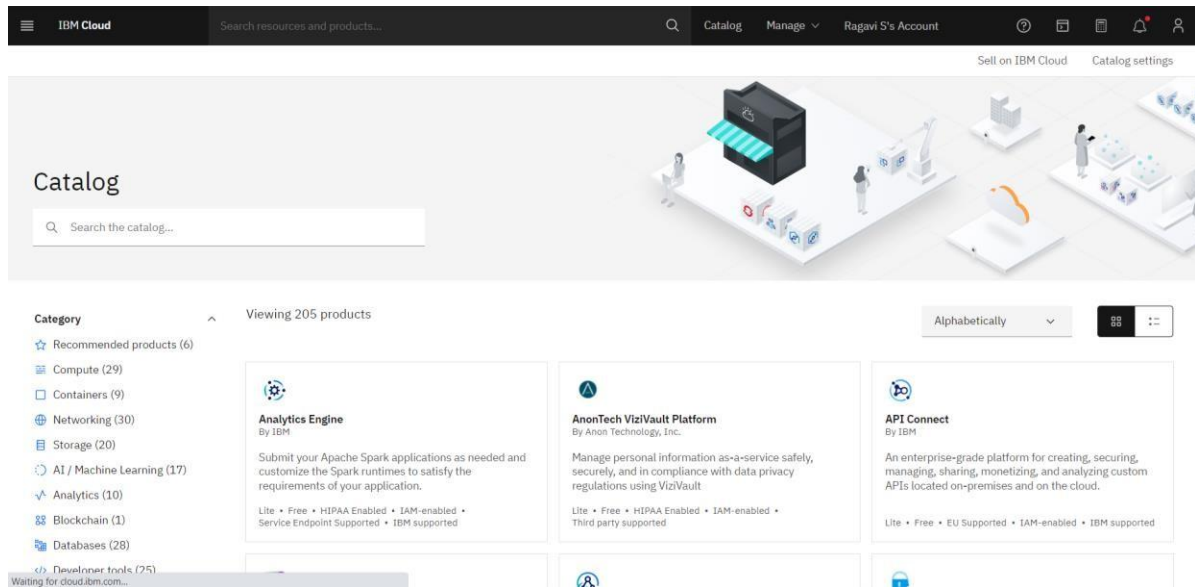

1. First create an IBM cloud account with IBMid and password

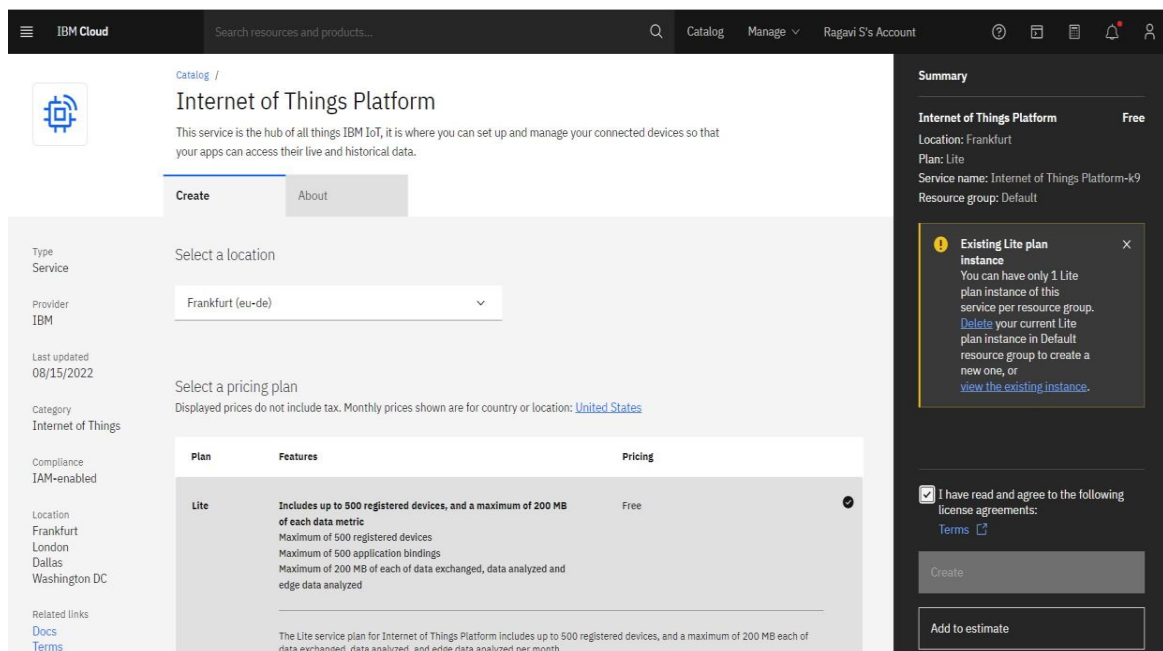

2. Home page of IBM cloud

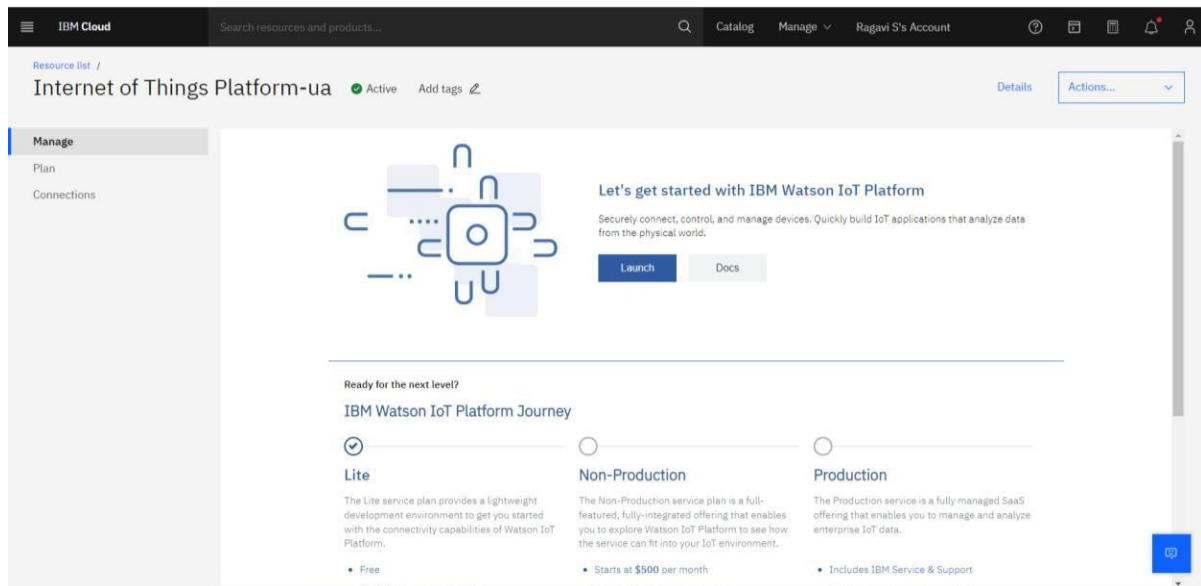

3. Click on the catalog on the top. Search for INTERNET OF THINGS PLATFORM

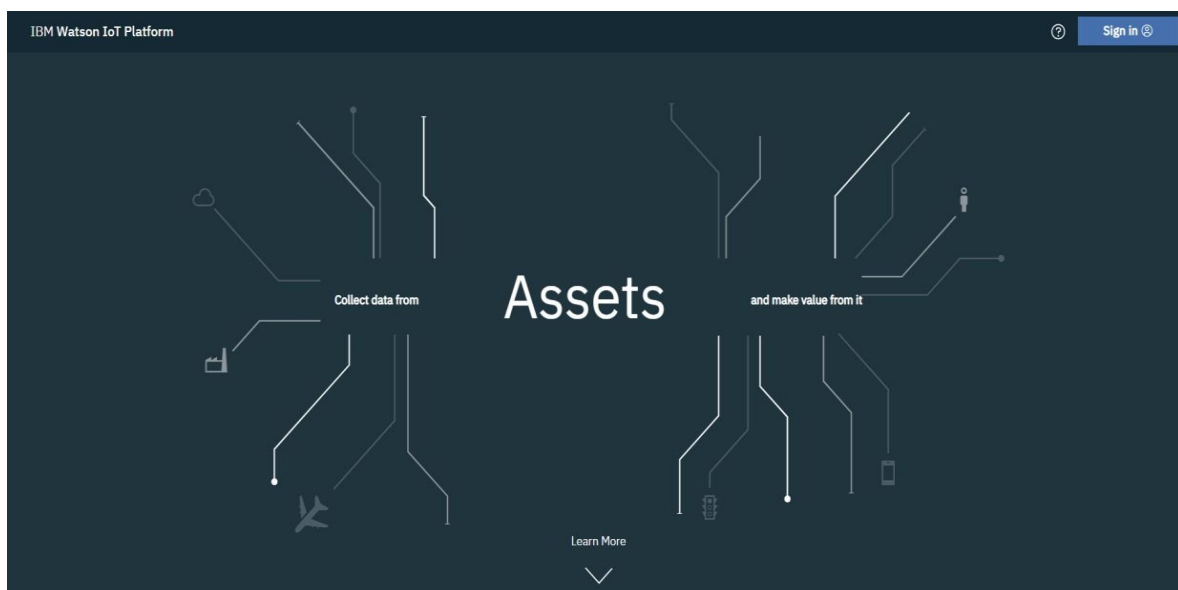

4. Enter the location and in the configure your resource type the service name and choose the plan, tick the agree with agreements and then click on create.

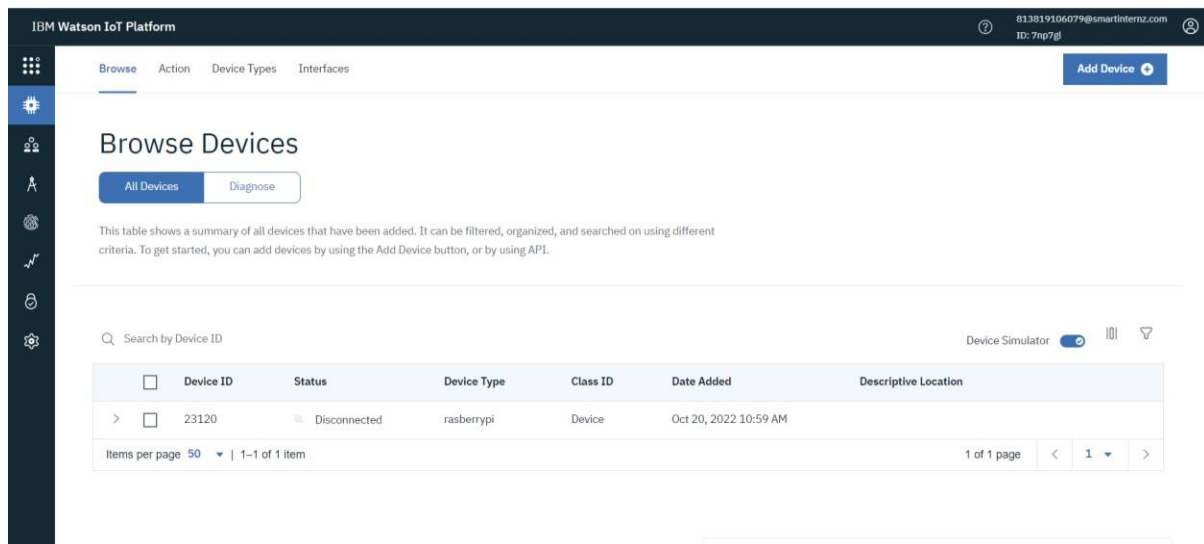

5. Internet of Things Platform Child safety will be created, where there are different options like manage, plan, and connection (manage is for launch, Plan gives us the idea about the payment package and its upgrades, and lastly the connection is for to connect IoT with other services). Click on launch.

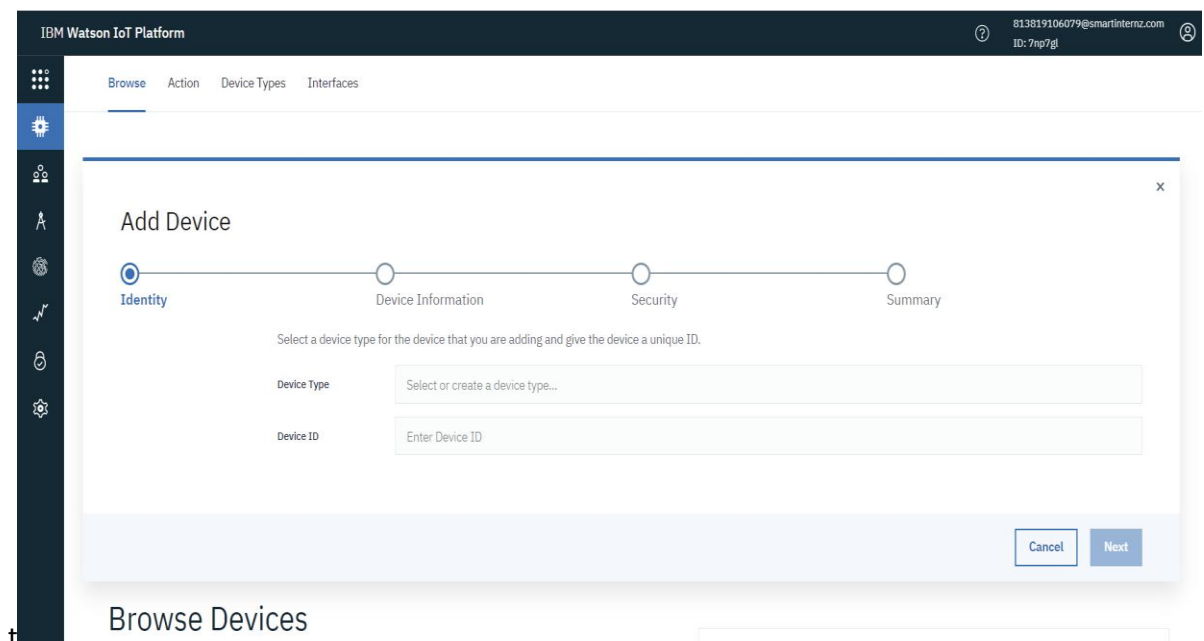

6. Now you need to sign in. Enter the details to sign in to the Watson Cloud to create a device.

7. And again clicking on the launch button will open this tab, the device will help in the creation of the devices, the addition of devices, and the display of details of the devices.

8. Click on the device tab and click on the add device button, then give the device type and device id and click next.

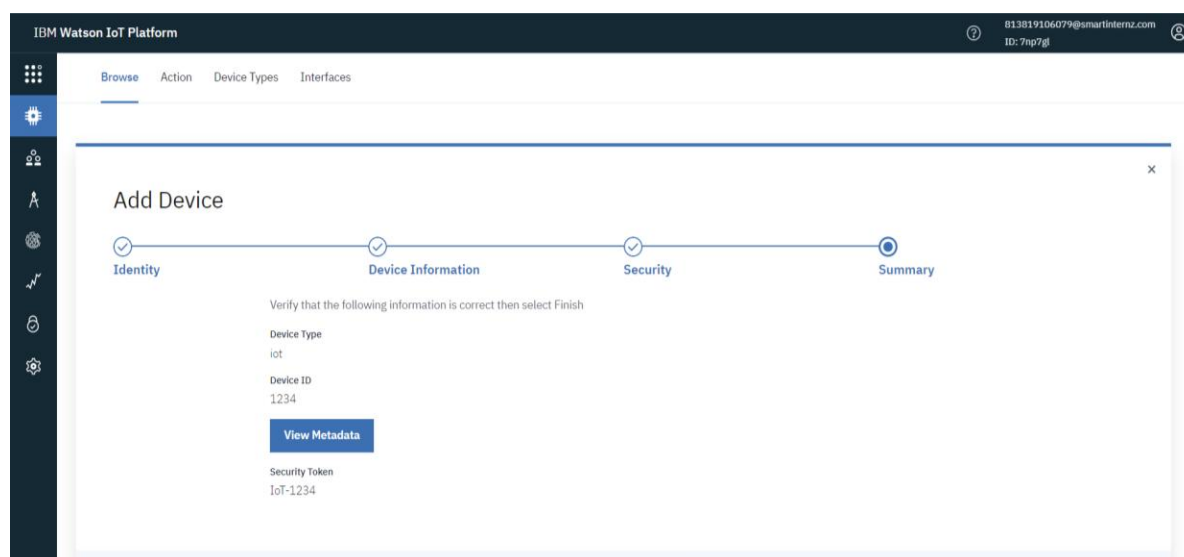

9. This page to enter extra details and of the hardware.

The screenshot shows the 'Add Device' wizard in the IBM Watson IoT Platform. The progress bar indicates four steps: Identity (completed), Device Information (current step), Security, and Summary. The 'Device Information' step contains two columns of input fields. The left column includes 'Serial Number', 'Model', 'Description', and 'Hardware Version'. The right column includes 'Manufacturer', 'Device Class', 'Firmware Version', and 'Descriptive Location'. Each field has a placeholder text 'Enter [field name]'. At the bottom left of the form is a button labeled 'Add Metadata' with a plus icon. The top navigation bar shows 'Browse', 'Action', 'Device Types', and 'Interfaces'. The top right corner displays the user's email '813819106079@smartinternz.com' and ID 'ID: 7np7gl'.

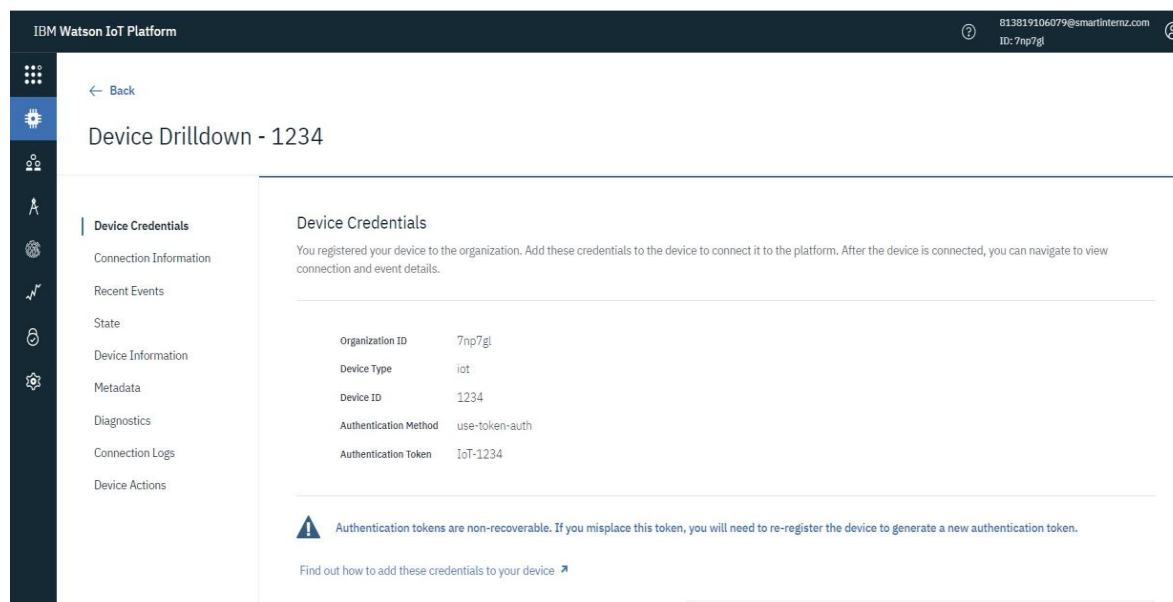

10. Clicking next it goes to the security where we do authentication token id.

The screenshot shows the 'Add Device' wizard in the IBM Watson IoT Platform, now at the 'Security' step. The progress bar shows 'Identity' and 'Device Information' as completed steps, 'Security' as the current step, and 'Summary' as the next step. The 'Security' step presents two options for selecting a device authentication token. The first option is 'Auto-generated authentication token (default)', which allows the service to generate a token. The second option is 'Self-provided authentication token', which requires the user to provide their own token. Below these options is an input field labeled 'Authentication Token' with the placeholder text 'Enter an optional token'. A note at the bottom states: 'Make a note of the generated token. Lost authentication tokens cannot be recovered. Tokens are encrypted before being stored.' The top navigation bar and user information remain the same as in the previous screenshot.

11. Clicking on next it goes to the summary of the device then click finish.

12. The device credentials will be displayed with all the details. Save the details of the device as the authentication tokens are non- recoverable and if misplaced then we have to create a new one.

13. Clicking on the device tab we can now see the added device. Clicking on it will display the other details. It has different tabs like Identity, Device Information, State and login.
